

## **Indonesia**

Indonesia ratified the Biological Weapons Convention in 1991

### ***Enforcement Actions***

Safety measures in microbiological laboratories are regulated by the Decision of the Department of Health on the Safety in Microbiological Laboratory and Bio-medics.

In the case of missing hazardous materials, investigation is conducted by the National Police with the assistance of experts from relevant agencies.

The Department of Health has created a rapid response team to overcome emergency situations, such as bio-terrorism attack. In addition, an Early Warning Outbreak Reporting System (EWORS) has been developed.

Control mechanism on export and import of goods is conducted through:

a. Pre-service control:

Control is conducted through a risk management system. This approach uses an intelligent operation method. In this regard, the target to be controlled is chosen by analyzing the supplier, means of transportation, country of origin and information gathering.

Control during service process:

Control is conducted through selective random examination of samples or on Intelligence Notes resulting from analysis of custom documents.

Post-service control:

Control of exported or imported goods that are not covered by the pre-service and during service controls, upon preliminary indication of violations of regulations. This control includes post audit of the importer and exporter
