Entrust®
Securing Digital Identities & Information

Entrust was chosen for the INTERPOL Travel Document initiative to provide both the software design for INTERPOL's e-Identification Card (e-ID Card), as well as the underlying public key infrastructure (PKI) that enables the e-ID Card to be globally trusted and interoperable for validation at Border Control. Entrust and INTERPOL have collaborated on the development of this multi-purpose credential.

Each INTERPOL e-ID card contains a multipurpose digital identity with the holder's personal data. The security of this data is of utmost importance, and Entrust's software serves to protect and manage that information as the digital identity is created, stored on the card and accessed by authenticated readers. The digital identities conform to international travel document standards so the e-ID Card can be used to expedite border crossing. The digital identity contained on the e-ID Card can also enable building access, computer/logical access and a wide range of key applications, including secure e-mail and document signing.

The digital identity on the INTERPOL e-ID Card and the INTERPOL e-Passport Booklet are secured using PKI. Entrust's ability to weave together advanced physical and digital security features and deliver ICAO and European Commission compliant PKI capabilities as a service was a key consideration for INTERPOL in choosing to partner with Entrust

> ABOUT ENTRUST

With over 350 staff in 10 countries around the world, Entrust presents itself as a global leader in identity-based security solutions that safeguard enterprises, consumers, citizens and websites. More than 4,000 organizations in 60 countries leverage Entrust's world-class security solutions, which include strong authentication, fraud detection, digital certificates, PKI, citizen eID, employee credentialing, ePassport security, e-mail security, SSL and more.

Entrust's customers include elite organizations in the fields of e-government, finance, aerospace and defense, telecom and manufacturing. Over 40 national governments, US Bank, US Department of State, NASA, U.K. Ministry of Defence, Banco Santander, DnB NOR, and more look to Entrust to help protect the most sensitive of identities and assets.
